

ABSTRACT

A knitted fabric, such as present in a glove, provides cut resistance, wicking of moisture and thermo regulating properties. The fabric is made with at least one bundle of at least one yarn wherein the yarn comprises at least two strands: at least one of the strands in the bundle having a sheath/core construction with a sheath of cut resistant staple fibers and a metal fiber core; and at least one of the strands in the bundle having cut resistant aramid fibers and being free from metal fibers.
